In the Specification:

The paragraph beginning on page 11, line 22 has been amended as follows:

The exemplary state diagram also makes use of the following nomenclature:

tm=timeout; en=enter; ex=exit. Thus, for example,

tm(ex(CHARGING), DETECTION\_TIME)

means that when the DETECTION\_TIME elapses after exiting the CHARGING state a timeout will occur, triggering the associated path to be traversed and the state to change. ~~Other expressions re~~
